

MULTI-PLATFORM

FieldGenius for Android™ is the first iteration of a plan to provide customers with full range of multi-platform options. New versions of this next generation FieldGenius product are in the works for Windows and IOS devices. Our goal is to provide users with a choice on what hardware and platform to use. MicroSurvey is developing one application that will run on multiple platforms with the same look, feel and functionality.

HARDWARE FREEDOM

With FieldGenius for Android™ you are not locked in to one hardware supplier. FieldGenius connects with GNSS receivers and Total Stations from dozens of different manufactures. With FieldGenius for Android, we will continue to support the widest possible range of survey instruments offered by manufacturers around the globe. Hardware freedom means you can train staff on one field survey software package for use with the widest variety of instruments in your inventory.

MAP-DRIVEN

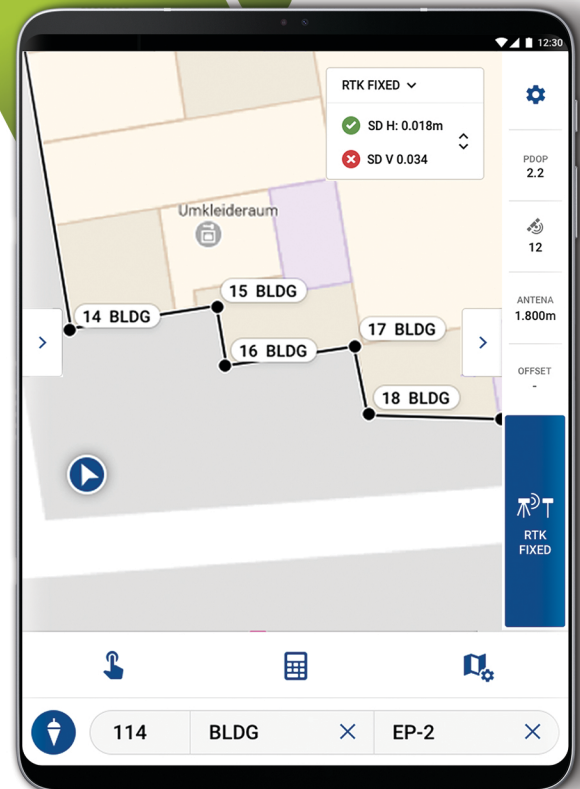

FieldGenius for Android™ has maintained MicroSurvey's iconic industry leading real time display of survey data and field observations on interactive maps. Project progress is easy to visualize in FieldGenius because all new work is displayed on the map as it is conducted; a quick review makes it easy to see points that are out of place. New slide-out panels displaying observation and point data provide key information at a glance, and an integrated details page is provided for further analysis.

DECADES OF INNOVATION NOW ON ANDROID

MicroSurvey brings decades of innovation and expertise in survey field software creation to our next generation multi-platform FieldGenius Application. Customers will feel right at home in the familiar interface and be instantly productive using their favorite features. New users will love the logical, map-driven layout and built-in help resources to get them surveying with little to no downtime. Try it yourself to see just how easy it is to get into FieldGenius.
